

LONG-HAUL PARTNER  
FOR LEADING AEROSPACE COMPANIES

## A FEW WORDS FROM SHAREHOLDERS

An ambitious project, loyal customers, steady governance, qualified and passionate employees have allowed us, for more than forty years, to make our production units recognized as centers of excellence, and Group Lauak a Tier 1 supplier to OEMs and Tier 2 to renowned aerospace companies.

In order to continually improve our productivity and competitiveness, we continue to move towards Industry 4.0.

Thus, in Grandola (Portugal), we inaugurated in 2020 a unit of 12,000 m<sup>2</sup> firmly digital and connected, dedicated to thin sheet metal cutting, machining of large dimension aluminum parts, automated surface treatments and coatings with tanks of 4-meters (for both light alloy and hard metals), and robotic bending. In parallel, we are expanding our implantation in North America. In Mirabel, in parallel with the existing tubes & pipes activity, we will soon develop other core business lines. This Canadian site is closely linked to our new established site in Queretaro (Mexico).

We have also created a Joint Venture with an Indian partner well known in machining and surface treatments which allows us to benefit from a Best Cost presence in Asia and to support our customers in their local development. Our international expansion brings us even closer to our customers, helping to diversify our offer and improve our competitiveness. Due to our clients' confidence we are able to support and accompany them in defining their needs, and also to suggest innovative solutions leading to a fruitful long-term partnership.

We will take up the various challenges ahead, keeping in mind the values which constitute our DNA :

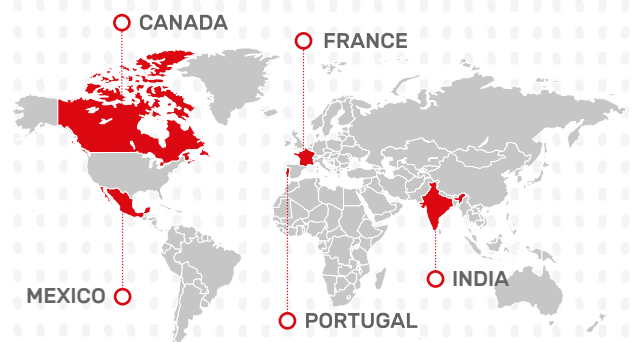

**HUMILITY, AGILITY, ETHICS AND COMMITMENT.**

RELIABILITY. PERFORMANCE.

To achieve excellence and improve our productivity and our competitiveness we have decided to develop our organization with the creation of a digital transformation center around the project LAUAK 4.0.

## WE HAVE LAUNCHED 4 MAJOR AND DECISIVE PROJECTS :

1

### REAL TIME TRACKING OF WORK ORDERS (WO) USING CONNECTED BOXES

- Localization by area
- Interfaced with the scheduling lines in the plant
- LED identification

2

### DIGITAL INSTRUCTION SHEET

- Digital continuity
- Real-time monitoring configuration management
- Implementation of Poka-yoke

3

### DIGITAL «PSS» (PROBLEM SOLVING SYSTEM)

- Real-time KPIs
- Proactivity
- Performance management

4

### HUMAN RESSOURCES DEVELOPEMENT

- Creation of autonomous production units
- Training and skills promotion
- Talent management

# INNOVATION

## LAUAK, YOUR PARTNER FOR INNOVATION

Innovating at LAUAK means imagining and developing the products, the technologies and the processes of tomorrow, in order to maintain our industrial excellence.
